

Bin Separator for 2 wheel bins

SAFETY FIRST

- Always ensure work area is clean and safe at all times.
- Always wear steel cap boots, gloves, hearing, or other personal protective equipment as required.
- Always use correct manual handling techniques.

Obtain Separator

- 1.** Select the appropriate bin separator to suit bin size.

Note:

- *Separators are selected on the basis of the width of the device, against the width of the bin in use*

Separate bins

- 2.** Position the bin separator between the two required bins within the stack as per image 1
- 3.** Pull back on the bin separator to force the two bins apart as per image 2.
- 4.** Repeat steps two and three to separate the remainder of the stack.

Clean-up

- 5.** Return tools to their correct storage location after use.

IMPORTANT

- If separating bin stacks on the stack trolley, once the stack has been reduced past the first supporting upright of the trolley, the stack should be removed from the trolley and lowered manually to the ground for separation.

MAINTENANCE PRE CHECKS

You must check that:

The bin separator is in good working order i.e. no broken welds, no bent arms.
